1. Click the Exhibit button to view the topology.

In this diagram, Host G is attempting to send a packet to Host A through Router E. All routers are running EIGRP, and Router E has installed the following route in its routing table:

10.1.1.0/24 via router F

What will occur when Router E receives packets from Host G that are destined for Host A?

- A. E cannot have a route to 10.1.1.0/24 through F; so it will always choose the path through C.
- B. This is a routing loop; E will forward the traffic to F, and F will send the traffic back to E.
- C. Router E will forward the traffic to Router F.
- D. Router E will forward the traffic to Router F and send a 'host not reachable this direction' ICMP packet to Host G.
- E. Router E will forward the traffic to Router F and send an ICMP redirect to Host G.

Answer: E

2. WCCP is a communication protocol used between routers and cache devices. On what port does this protocol communicate?

- A. 80
- B. 2180
- C. 8080

Answer: E

3. Click the Exhibit button.

A. 198.133.219.25.in-addr.arpa.

B. 198.133.219.0.in-addr.arpa.

C. 0.219.133.198.in-addr.arpa.

D. 25.219.133.198.in-addr.arpa.

Answer: D

5. Click the Exhibit to view the topology.

In this network, Host A is trying to reach Host D. There is no routing protocol running, but Router B and C have the following static routes configured:

Router B: ip route 10.1.3.0 255.255.255.0 ethernet 1

Router C: ip route 10.1.1.0 255.255.255.0 ethernet 1

A. This will not work because Router B has no idea of how to forward traffic to the 10.1.3.0/24 network.

B. This will work because Router B will recognize that Router C is on the 10.1.2.0/24 network through a router discovery protocol and will forward traffic for 10.1.3.0/24 to Router C.

C. This will not work because a broadcast interface in a static route command cannot be specified.

D. This will work because Router B will ARP for Host D's IP address on the 10.1.2.0/24 network and Router C will answer.

Answer: D

C. The server periodically scans the DIT to check that the schema is not violated, and sends a notification to the operator when it finds an inconsistency caused by clients
